Technology-driven age?

Rather, deep conceptual changes are being enabled, accelerated and influenced in iterative ways by digital technologies.

Re-imagining Higher Education in the Digital Age

- Education: From teaching content to acquiring content AND competencies = Learning (developing talent)
- Research: From increasing specialization to specialization AND contextualization = the Research T
- Innovation: From Technology Transfer to People-Centered Innovation = Engaged Scholarship

How the digital triangle is framing the 21st century

Digital Technologies

Digital Content

Digital Literacies

The Emergence of Digital SSH Scholarship in Canada

Examples:

- **1978:** Canadian Committee on History and Computing
- **1986:** COCH/COSH (Consortium for Computing in the Humanities) which became SDH/SEMI (Society for Digital Humanities/Société pour l'étude des médias interactifs).

First steps at SSHRC (beginning early 1990s): Research Data Policy

“All research data collected with the use of SSHRC funds must be preserved and made available for use by others within a reasonable period of time. SSHRC considers ‘a reasonable period’ to be within two years of the completion of the research project for which the data was collected.

The purpose of this policy is:

- To facilitate the advancement of knowledge in the social sciences and humanities by encouraging researchers to share research data
- Greater availability of research data will contribute to improved training for graduate and undergraduate students”

Public Funding = Public Good = Public Access

The Changing World of Scholarly Communication: Challenges and Choices for Canada

(November 1996)

A stark picture of the rising costs of
academic journals

Digital \neq Analog

“New information technologies represent one of the major impacts on humanities teaching and research. They also present an exciting opportunity for scholars, teachers and students to become informed partners and innovators.”

***Working Group on the Future of the Humanities,

03/2001

REPORT OF THE WORKING GROUP ON THE FUTURE OF THE HUMANITIES

ALTERNATIVE
WOR[L]DS THE HUMANITIES IN 2010

TO THE BOARD OF THE SOCIAL SCIENCES AND
HUMANITIES RESEARCH COUNCIL OF CANADA

Budapest Open Access Initiative

“...results of research produced by authors without expectation of payment...”

(2001)

“The overall objectives of the **Image, Text, Sound and Technology** program are to:

- reflect on, interpret, and analyze new digital media, multimedia, and text-based computing technologies, and integrate these into humanities and social sciences research;
- bring together theorists, experimentalists, and technologists from different disciplines to share and nurture ideas and methods that challenge research to advance through the use of audio-visual and text-based technologies; and
- facilitate the creation of national and international networks of, and partnerships among, researchers, industries, governments, and individuals that will promote and sustain social sciences and humanities research and resources worldwide.”

Berlin Declaration 2003

To promote the internet as a medium for
disseminating global knowledge

To accelerate the pace of scholarship and research

GUIDING PRINCIPLES FOR SSHRC'S OPEN ACCESS POLICY

In October 2004 SSHRC adopted, in principle, a policy of open access that would guide the development of its research support programs.

Following consultations with the research community, SSHRC adopted in 2006 a three-part strategy:

- 1) awareness raising;**
- 2) education;**
- 3) promotional approach to Open Access.**

**Re-thinking the
work of
publishing:**

**Not printed
journals, books,
etc.**

**Rather, doing work
as**

1) Filter

2) Curator

New Approach to Funding Scholarly Journals (2006-2007)

“The value of the basic grant will be calculated on the basis of \$850 for each approved, peer-reviewed scholarly article to be published during each year of the grant period.”

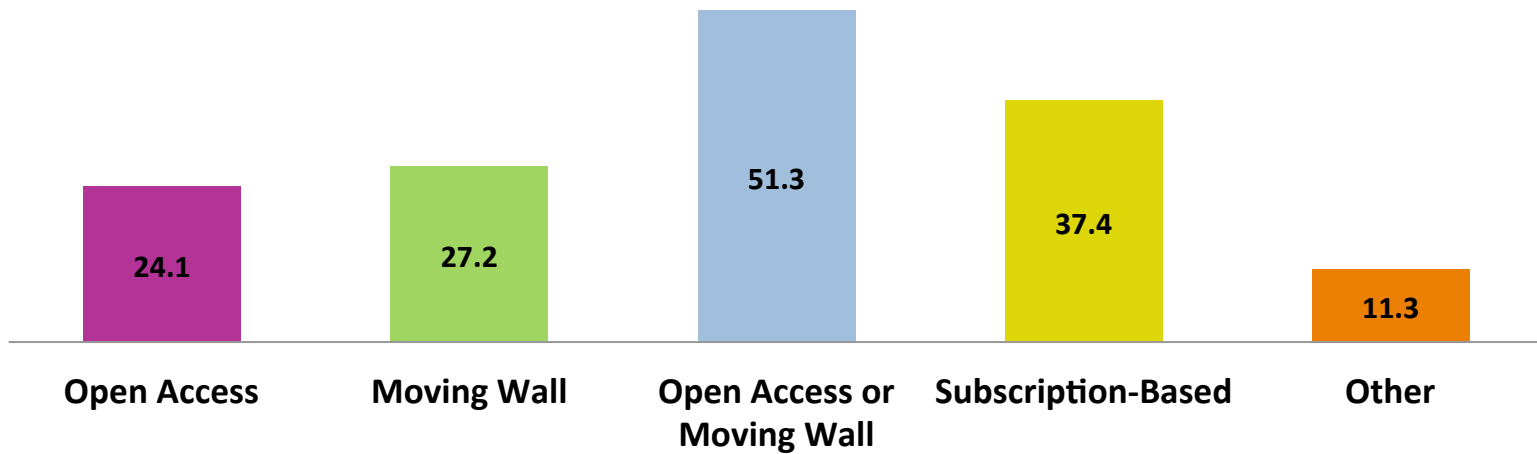

New Approach to Funding Scholarly Journals (2006-2007)

“The value of the basic grant will be calculated on the basis of \$850 for each approved, peer-reviewed scholarly article to be published during each year of the grant period.”

“As part of the total grant value, up to \$5,000 per annum may be requested for....transition costs, or those costs directly related to the transition to an electronic medium (the purchase of new computers, including software, costs related to the launch of a website, and staff training).”

SSHRC Journals Competition 2011: Business Models of Applicants

Percentage of Applicants

“Philosopher’s Imprint is an open-access philosophy journal from the University of Michigan. Its motto is, *‘Edited by philosophers, published by librarians.’* “¹

1. The public is interested in our topics!
Therefore, the public has expectations about being able to read intelligently about what is written.
2. Our journals have higher rejection rates (70-90%) than science, technology and medical journals (20-40%)
3. Shelf life...

“ ...the following syllogism: (1) Scholars in the humanities sometimes use technical language. (2) I don't understand it. (3) Therefore, they are ripping off both their students and the taxpayers...

Would she commit herself to the same claim about, say, kinesiologists, and their technical knowledge? Mathematicians?

– Stephen Siemon, Edmonton,
Letter to the Editor, Globe and Mail, October 24th 2011

**As part of our *Knowledge Mobilization Strategy*,
SSHRC has made open access a priority.**

SSHRC will:

- Facilitate and enable the accessibility and impact of research by *increasing and enhancing the flow of research knowledge* among researchers, and between researchers and knowledge users
- Improve research connections by *facilitating reciprocal relationships between researchers and knowledge users* for the (co-)creation and use of research knowledge
- Enhance the quality of knowledge mobilization by *developing networks, tools and best practices*

Welcome to the HCI-Book Strategic Research Cluster

Our work aims to foster the further understanding of the significance of digital and analog books and their role in humanities scholarship. We are very grateful that a **Social Sciences and Humanities Research Council of Canada (SSHRC)** research cluster award made possible the preliminary work presented on the website.

Research questions

Key questions to be addressed include:

- What do we really know about the ways in which we interact with new texts that replace the print artifact and re-present to us the knowledge and experience of the past, as well as deliver the direct-to-digital record of the present?
- How do we understand the ways in which we interact with these knowledge objects, and the information they contain?
- How do we understand the impact that the confluence of media formats in these digital objects has on our use of them, such that we may best facilitate interaction with the new digital artifact?

HCI-Book members

The HCI-Book group is comprised of researchers and stakeholders at the forefront of computing in the humanities, text analysis, information studies, usability and interface design. The network is led by Canadian scholars, but includes members from the USA and the UK. It is comprised of those who are best-poised to understand the nature of the human record as it intersects with the computer. Our work is divided into four key research groupings: reader studies, information management, interface design and textual studies.

Key research objectives

The working group will begin to identify the central issues relating to the digitization of the human record and to act on that identification, to the end of:

- understanding and describing the basic principles of humanistic interaction with knowledge objects (digital and analog alike)
- articulating core strategies for the design of humanistic knowledge objects, especially electronic books, based on this understanding
- suggesting basic principles necessary for evaluating and implementing current technologies, and exploring future ones.

Further information

For information about the HCI-Book Research Group beyond this website, please contact Dr. Ray Siemens (lastname at uvic dot ca), at the University of Victoria.

The text presented on this website was edited by Vika Zafrin, with Alan Galey.

Project Bamboo is building applications and shared infrastructure for humanities research.

Learn more ▶

Research Applications

Research environments and open source tools for collaboration, content-management, and analysis of humanities collections.

Shared Infrastructure

Web services and platforms to support and connect humanities tools and collections.

ABOUT PROJECT BAMBOO

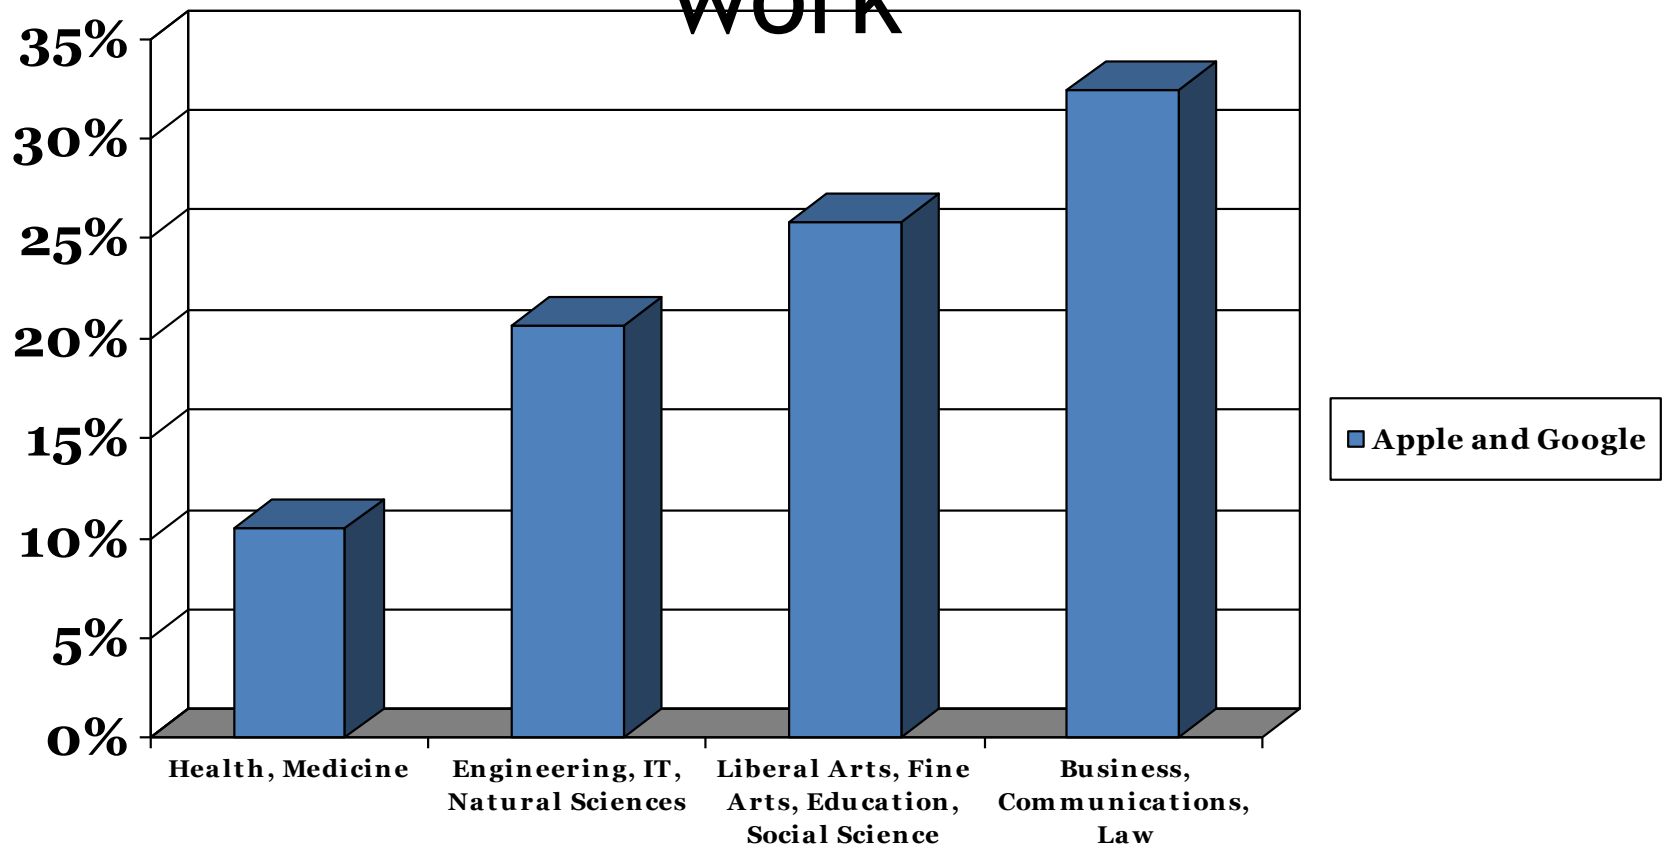

Project Bamboo is now in its first, 18-month phase of technology development. By Spring 2012 we will deliver three things. First, research environments for humanities scholars. Second, behind the scenes infrastructure allowing librarians and technologists to better support humanities scholarship across institutions. And third, a blueprint for the next phase of the Bamboo Technology Project, focusing on the evolution of shared applications for the curation and exploration of widely distributed content collections. Working concurrently with the Technology Project, there is an effort to build a community to ensure that Project Bamboo work is expanded and sustained over time.

HUMANITIES 2.0 Digital Keys for Unlocking the Humanities' Riches

Martin K. Foys, a medievalist at Drew University, with a detail of an 11th-century map of the world.

By PATRICIA COHEN
Published: November 16, 2010

A history of the humanities in the 20th century could be chronicled in "isms" — formalism, Freudianism, structuralism, postcolonialism — grand intellectual cathedrals from which assorted interpretations of literature, politics and culture spread.

Humanities 2.0

Old Books, New Media

Articles in this series are examining how digital tools are changing scholarship in history, literature and the arts.

Multimedia

Graphic
Mapping the Enlightenment

The next big idea in language, history and the arts? Data.

Members of a new generation of digitally savvy humanists argue it is time to stop looking for inspiration in the next political or philosophical "ism" and start exploring how technology is changing our understanding of the liberal arts. This latest frontier is about method, they say, using powerful technologies and vast stores of digital materials that previous humanities scholars did not have.

These researchers are digitally mapping **Civil War** battlefields to understand what role topography played in victory, using databases of thousands of jam sessions to track how musical collaborations influenced jazz, searching through large numbers of scientific texts and books to track

Wired beyond the beyond The Humanities with Heavy Iron

By Bruce Sterling December 7, 2009 | 10:45 am | Categories: Uncategorized

"I see more and more of this lately: humanities scholars who somehow think they need more power than physicists. If you take the trouble to check out the scholars who won't turn."

"Personally, I'm waiting for the first novelist who needs massive number-crunching to mean a literary feat that would 'manage a deluge of data and turn bits of information into a story.'"

"I suppose it could be argued that Google and Wikipedia is doing that for us."

A 'New Digital Class' Digs Into Data

December 4, 2009, 2:03 pm

By Jennifer Howard

Fifty-three thousand 18th-century letters. Twenty-three thousand hours of digitized world music. The records of more than 197,000 individual trials held in Britain over 240 years. What can humanities scholars and social scientists do with such large tracts of raw material? This year the **Digital Humanities** submit proposals for big-scale, collaborative inquiry.

Digging into data in new ways

14 June 2010

What do you do with a million books? Or a million newspaper pages? Or a million art images? Scholars now have access to huge repositories of digitised data - far more than they could read in a lifetime. And yet the way researchers access these documents is still based on the relatively linear process of searching for specific data like keywords, names, events, places or dates. Once the user has entered such a search term they are then presented with a list of hits to scan and choose from.

While accelerating the speed of research, such searching does not permit the

Public Investments in Open Access

Canada's major public funding agencies make investments in research and research training for the benefit of all Canadians, and the world. New knowledge and insights gained through research provide solutions to many of the issues most important to Canadians:

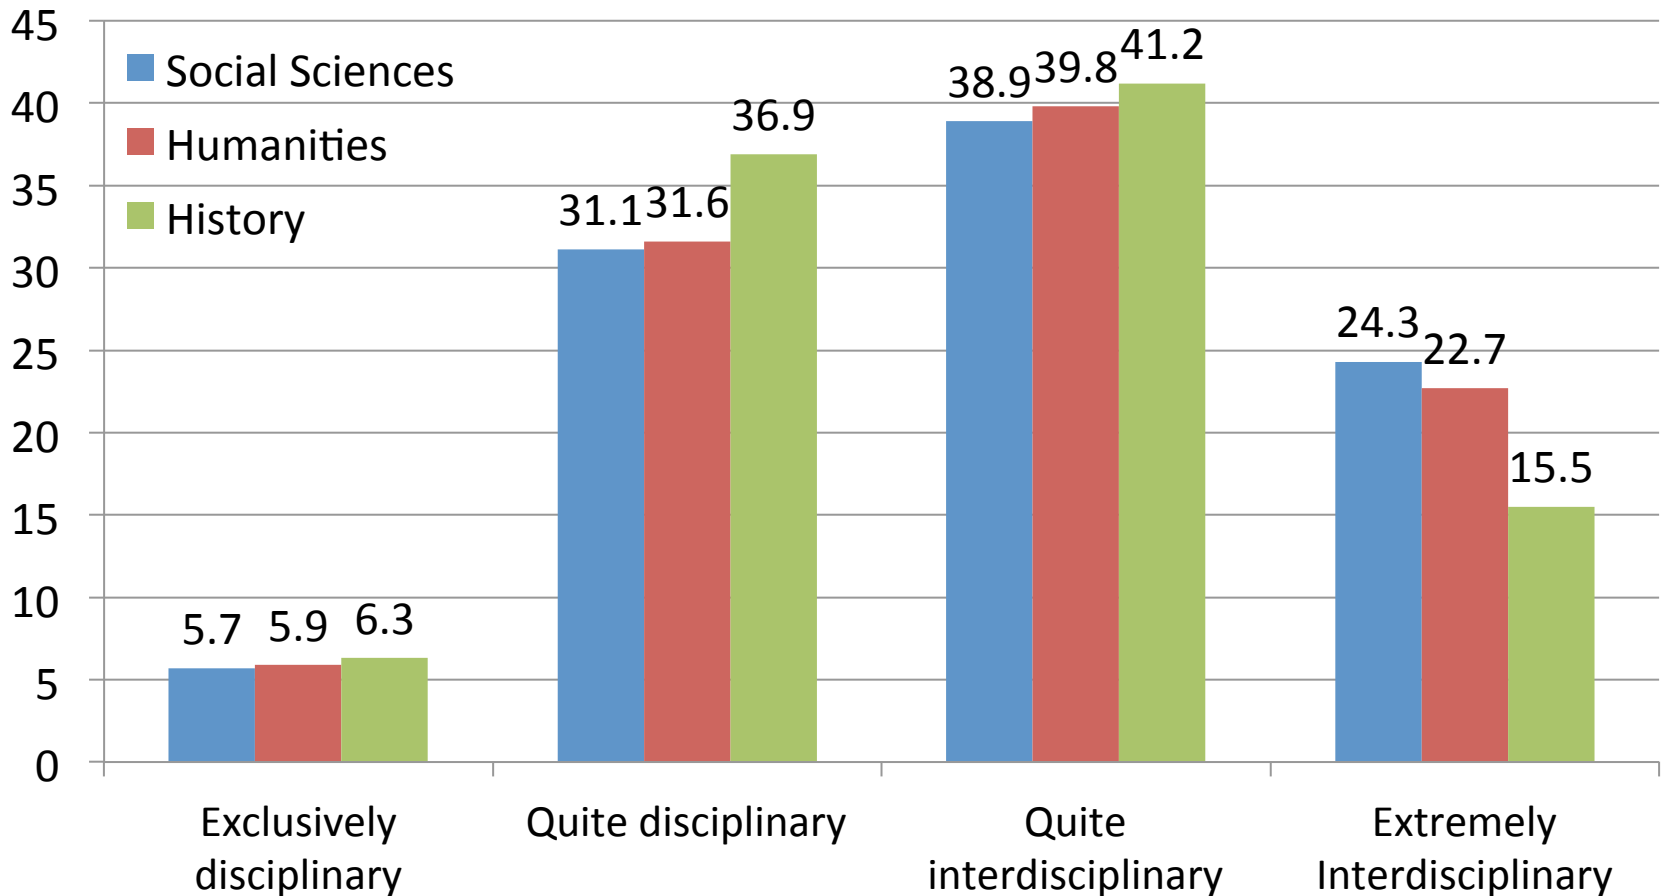

- To improve the quality of our environment and health;
- Enhance public safety and security;
- Develop sound public policies;
- Understand human experience and the complexity of our relations across cultures, languages, religions and histories;
- Protect endangered species; advance economic prosperity; and so on.
- As such, research agencies have a fundamental interest in ensuring that the results of the research they fund are disseminated as widely as possible...

There is a growing number of examples that illustrate how open access to research data and publications have contributed to advances in knowledge. Open access publications are used and cited more widely by other researchers. **In relation to the wider community, open access contributes to the 'informed citizen' and 'informed consumer'.** In addition, there is a growing body of evidence that open access would result in significant economic benefits at the national level as well...

-Comprehensive Brief on Open Access to Publications and Research Data for the Federal Granting Agencies, June 2011, p. 3

“On a scale ranging from extremely interdisciplinary to exclusively disciplinary, how would you characterize your research?”
